KASNEB PASTPAPERS · CPA STUDY MATERIALS

Quantitative Analysis — PREVIEW

Course: CPA — Certified Public Accountant | **Level:** Foundation Level (CA15)

This is a free preview. It shows the exam-paper layout used throughout the full document, plus the introduction section.

Contents (full paper)

1. Basic algebra and linear equations — *included in this preview*
2. Simple and compound interest — full version only
3. Annuities, basics — full version only
4. Measures of central tendency — full version only
5. Measures of dispersion — full version only
6. Index numbers — full version only
7. Basic probability — full version only
8. Simple linear regression and correlation, introduction — full version only
9. Full worked question — annuity and standard deviation — full version only
10. Practice examination — KASNEB-style paper — *Question One shown below; Questions Two–Five full version only*
11. Marking guide — model answers to the practice examination — full version only
12. Exam technique and revision checklist — full version only

---

1. Basic algebra and linear equations

Many quantitative business problems reduce to a linear equation that can be solved by isolating the unknown. For example, given Total cost = Fixed cost + (Variable cost per unit × Units), if total cost, fixed cost and variable cost per unit are known, the number of units can be found by:

Units = (Total cost − Fixed cost) ÷ Variable cost per unit

Sample of the practice examination (Question One of Five)

Note on format. The full paper includes a complete practice examination laid out the way a real KASNEB CPA paper is laid out — timed, five compulsory 20-mark questions — so you can rehearse the exact exam format before sitting the real thing. This is an original practice paper, **not a reproduction of any actual KASNEB past paper.**

CPA FOUNDATION LEVEL — QUANTITATIVE ANALYSIS (PRACTICE PAPER)

TIME ALLOWED: 3 HOURS

Instructions to candidates: Answer ALL FIVE questions. Each question carries 20 marks. Show all workings clearly.

QUESTION ONE

A trader's total cost is given by: Total cost = 60,000 + (300 × units). Last month, total cost was KSh 165,000.

(a) Form the equation and solve for the number of units. *(8 marks)*

(b) Compute the compound amount of KSh 80,000 invested at 8% per year for 3 years. *(8 marks)*

(c) Briefly distinguish simple interest from compound interest. *(4 marks)*

(Total: 20 marks)

Questions Two, Three, Four and Five — plus the full marking guide with model answers to all five questions — are in the full version.

Unlock the full paper

The complete version includes interest and annuity calculations, central tendency and dispersion, index numbers, basic probability, correlation and regression, a fully worked annuity/standard-deviation question, the complete five-question KASNEB-style practice examination with a full marking guide, and an exam technique and revision checklist.
