

Business Mathematics and Statistics — PREVIEW

Course: ATD — Accounting Technicians Diploma | **Level:** Level II

This is a free preview. It shows the exam-paper layout used throughout the full document, plus the introduction section.

Contents (full paper)

1. Basic algebra for business problems — *included in this preview*
 2. Percentages, ratios and proportions — full version only
 3. Simple interest — full version only
 4. Compound interest — full version only
 5. Measures of central tendency — mean, median, mode — full version only
 6. Measures of dispersion — range and standard deviation — full version only
 7. Simple index numbers — full version only
 8. Basic probability concepts — full version only
 9. Full worked question — compound interest and mean calculation — full version only
 10. Practice examination — KASNEB-style paper — *Question One shown below; Questions Two–Five full version only*
 11. Marking guide — model answers to the practice examination — full version only
 12. Exam technique and revision checklist — full version only
-

1. Basic algebra for business problems

Many business problems can be expressed as a simple linear equation and solved by isolating the unknown variable. For example, if total cost = fixed cost + (variable cost per unit × number of units), and you know total cost, fixed cost and variable cost per unit, you can rearrange to solve for the number of units:

Number of units = (Total cost – Fixed cost) ÷ Variable cost per unit

The key skill is translating a word problem into a correct equation before attempting to solve it.

Sample of the practice examination (Question One of Five)

Note on format. The full paper includes a complete practice examination laid out the way a real KASNEB ATD paper is laid out — timed, five compulsory 20-mark questions — so you can rehearse the exact exam format before sitting the real thing. This is an original practice paper, **not a reproduction of any actual KASNEB past paper.**

ATD LEVEL II — BUSINESS MATHEMATICS AND STATISTICS (PRACTICE PAPER)

TIME ALLOWED: 3 HOURS

Instructions to candidates: Answer ALL FIVE questions. Each question carries 20 marks. Show all workings clearly.

QUESTION ONE

A trader's total cost is given by: Total cost = 40,000 + (250 × number of units). Last month, total cost was KSh 115,000.

- (a) Form the equation and solve for the number of units produced. (8 marks)
- (b) A quantity increases from 400 to 460. Compute the percentage increase. (6 marks)
- (c) Two partners contribute capital in the ratio 3:5. If total capital is KSh 320,000, compute each partner's contribution. (6 marks)

(Total: 20 marks)

Questions Two, Three, Four and Five — plus the full marking guide with model answers to all five questions — are in the full version.

Unlock the full paper

The complete version includes percentages/ratios/proportions, simple and compound interest, measures of central tendency and dispersion, index numbers, basic probability, a fully worked interest and mean-calculation question, the complete five-question KASNEB-style practice examination with a full marking guide, and an exam technique and revision checklist.
