 11. Marking guide — model answers to the practice examination — full version only
 12. Exam technique and revision checklist — full version only
-

1. Computer hardware and software

Hardware is the physical, tangible components of a computer (input devices like a keyboard/mouse, output devices like a monitor/printer, the CPU, and storage devices).

Software is the intangible instructions directing hardware — **system software** (e.g. the operating system) and **application software** (programs for specific tasks, e.g. spreadsheets or accounting packages).

Sample of the practice examination (Question One of Five)

Note on format. The full paper includes a complete practice examination laid out the way a real KASNEB CPA paper is laid out — timed, five compulsory 20-mark questions — so you can rehearse the exact exam format before sitting the real thing. This is an original practice paper, **not a reproduction of any actual KASNEB past paper.**

CPA FOUNDATION LEVEL — INFORMATION COMMUNICATION TECHNOLOGY (PRACTICE PAPER)

TIME ALLOWED: 3 HOURS

*Instructions to candidates: Answer ALL FIVE questions. Each question carries 20 marks.
Show all workings clearly.*

QUESTION ONE

- (a) Distinguish between hardware and software, with two examples of each. (12 marks)
- (b) Distinguish between data and information, with one example of each. (8 marks)

(Total: 20 marks)

Questions Two, Three, Four and Five — plus the full marking guide with model answers to all five questions — are in the full version.

Unlock the full paper

The complete version includes application software, spreadsheet formulas and functions, database basics, computer networks and internet use, information/data security, accounting information systems, a fully worked spreadsheet question, the complete five-question KASNEB-style practice examination with a full marking guide, and an exam technique and revision checklist.
