-

1. Introduction to business

A business combines resources — land, labour, capital, and enterprise — to produce goods or services that satisfy customer needs, typically in pursuit of profit.

1.1 Forms of business ownership (brief)

Form	Key feature
Sole proprietorship	One owner, unlimited liability, simplest to start
Partnership	Two or more owners sharing profit/loss per their agreement
Private limited company	Separate legal entity, liability limited to unpaid share capital
Co-operative society	Owned and controlled by members for mutual benefit

1.2 Business functions

Most businesses perform core functions: production/operations, marketing, finance/accounting, and human resources.

Unlock the full paper

The complete version includes the accounting equation, double entry essentials, basic financial statements, business mathematics (mark-up/margin, simple and compound interest), business communication, IT in business, a full worked question, and a 10-question original self-assessment kit with model answers.
