

# Introduction to Computing — PREVIEW

---

**Course:** CICT — Certified Information Communication Technologists | **Level:** Foundation Level

**This is a free preview. It shows the exam-paper layout used throughout the full document, plus the introduction section.**

---

## Contents (full paper)

1. What is a computer? — *included in this preview*
  2. Classification of computers — full version only
  3. Generations of computers — full version only
  4. Computer hardware — full version only
  5. Computer software — full version only
  6. The boot process — full version only
  7. Number systems and data representation — full version only
  8. Introduction to computer networks — full version only
  9. Computer viruses and basic security practices — full version only
  10. Emerging trends in computing — full version only
  11. Full worked question — number system conversion — full version only
  12. Practice examination — KASNEB-style paper — *Question One shown below; Questions Two–Five full version only*
  13. Marking guide — model answers to the practice examination — full version only
  14. Exam technique and revision checklist — full version only
- 

## 1. What is a computer?

A **computer** is an electronic device that accepts data as input, processes that data according to a set of instructions (a program), and produces information as output, typically storing data for later use along the way. This input → process → output → storage cycle is the foundation of everything a computer does, from a simple calculator to a large data-centre server.

---

## Sample of the practice examination (Question One of Five)

**Note on format.** The full paper includes a complete practice examination laid out the way a real KASNEB CICT paper is laid out — timed, five compulsory 20-mark questions — so you can rehearse the exact exam format before sitting the real thing. This is an original practice paper, **not a reproduction of any actual KASNEB past paper.**

### CICT FOUNDATION LEVEL — INTRODUCTION TO COMPUTING (PRACTICE PAPER)

**TIME ALLOWED: 3 HOURS**

*Instructions to candidates: Answer ALL FIVE questions. Each question carries 20 marks. Show all workings clearly.*

#### QUESTION ONE

- (a) Define a computer, and describe the input-process-output-storage cycle. (8 marks)
- (b) Outline FOUR categories used to classify computers by size and processing power, giving one example use of each. (12 marks)

*(Total: 20 marks)*

**Questions Two, Three, Four and Five — plus the full marking guide with model answers to all five questions — are in the full version.**

---

### Unlock the full paper

The complete version includes computer generations, hardware and software in depth, the boot process, number systems and data representation (with a fully worked conversion question), computer networks, viruses and basic security practices, emerging trends in computing, the complete five-question KASNEB-style practice examination with a full marking guide, and an exam technique and revision checklist.

**Purchase the full paper to continue.**
